The invention relates to secreted and membrane-associated polypeptides and polynucleotides. The sequences of the invention are useful in diagnostic assays for detecting diseases associated with inappropriate cativity or levels of these polynucleotides, and in identifying their agonists and antagonists that are potentially useful in therapy. The sequences of the invention are useful as vaccines for inducing immunological response. The sequences of the invention are useful for treating cancers, infections, autoimmune disorders, haematopoletic disorders, wound healing disorders, cholesteryl ester storage disease, infections alsorders, infections alsorders, cholesteryl ester storage disease, infections, alloss, consential muscular dystrophy, junctional epidermolysis bullosa, Parkinson's disease, Hurhington's chorea, multiple sclerosis, viral and bacterial infections, Alzheimer's disease, asthma, arthritis, allergies, schizophremia, sp8442445pRoa-associated disorders, septicaemia, psoriasis, inflammatory bowel disease, transplant rejection, graft verse host disease, ischaemia, stroke, acute respiratory disease, syndrome, restenosis, brain injury, AIDS, bone diseases, action, depression, anxiety disorders and myconic dystrophy, depression, anxiety disorders and sleep disorders, cation, anxiety disorders and myconic dystrophy, diseases including congestive heart failure and myconic dystroph, diseases including congestive heart failure and myconic dystrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              respiratory diseases including chronic obstructive pulmonary disease, acute bronchitis and adult respiratory distress syndrome, liver disorders including hypercholesterolaemia, hypertrisjyceridaemia, cirrhosis, viral and non-viral hepatitis, type II diabetes mellitus, renal disease including acute and chronic renal failure, glomerulomephritis, Fanconi's syndrome, cystinuria, skeletal muscle disorders including hyposlycaemia and tendinitis, gastroincestinal diseases including intestinal obstruction and tropical sprue, spleen disorders including hypersplenism, Hodgkin's disease and malignant lymphoma, testicular cancer, male reproductive diseases including low testosterone and male infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 FVQYKIMPSCSMKSSHQKPSGCWQHISCNPPGCRTLAKYGQRQWKNKEDCWGTQELSCDL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121 TSETSDIQEPYYGRVRAASAGSYSEWSMTPRFTPWWETKIDPPVMNITQVNGSLLVILHA 180
Novel secreted and membrane-associated polypeptides and polynucleotides useful for preventing, ameliorating or correcting dysfunction or disease including diabetes, cancer, hypertension and growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MMPKHCFLGFLISFFLTGVAGTQSTHESLKPQRVQFQSRNFHNILQWQPGRALTGNSSVY

The sequences can be used in the diagnosis, prevention and treatment of immune diseases, including psoriasis, cancer, chronic/life-threatening infections, rheumatoid arthritis, multiple sclerosis, Crohn's disease, ulcerative colitis and transplant rejection and in reproductive medicine, e.g. for diagnosing abnormal immune reactions which cause abortions. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MMPKHCFLGFLISFFLTGVAGTQSTHESLKPQRVQFQSRNFHNILQWQPGRALTGNSSVY

The present invention relates to the isolation of 9 novel human PRO polypeptides and the CDNA sequences (AAS15360-AAS15368) encoding them. The novel PRO polypeptides include PRO1356, PRO1368, PRO13684, PRO3144, PRO3151, PRO91822, PRO9964, PRO1008 and PRO19598. The CDNA sequences encoding these PRO polypeptides have been designated as clones. DNA648081-1553, DNA84188-2520, DNA87997, DNA89273, DNA864866-1601, DNA64903-1553, DNA8418-2520, DNA87997, DNA89273, DNA95223-2567, DNA969973, DNA8101921 and DNA145887 respectively.

COMPOSITIONS (e.g. vaccines) containing PRO polypeptides and methods of inflammatory disorders. Such disorders include immune-mediated inflammatory disorders (e.g. osteoarthritis), non-immune-mediated inflammatory disorders (e.g. osteoarthritis), non-immune-mediated inflammatory disorders (e.g. osteoarthritis), infectious disorder
                                                                                                                                                                                               Nucleic acids encoding PRO polypeptides, useful for detecting and treating immune related diseases and disorders in mammals including autoimmune diseases, inflammatory diseases and asthma -

The present invention relates to a new polymucleotide that encodes a soluble protein which binds to interleukin (IL)-TIF/IL-22 (also referred to as IL-22B), where the complementary sequence of the invention by the tringent conditions to a nucleotide sequence of 271 or 2366 base pairs, as given in the specification. The molecules of the invention are useful for inhibiting (antagoniaing) effect of IL-TIF/IL-22 on a cell, for determining whether IL-TIF/IL-22 is present in a sample, for inhibiting binding of IL-TIF/IL-22 to a binding partner, preferably in vitro, and for obtaining an antibody molecule specific for the soluble binding sprotein of the invention, from a population or panel of antibody molecules of diverse binding specificity. The soluble protein is further useful in manufacture of a medicament for treating an IL-22 mediated fasease and for assaying an asent, preferably an antibody or a peptide fragment of IL-TIF/IL-22 or the soluble protein, that modulates binding of the soluble protein to IL-TIF/IL-22, where the agent identified is used in the manufacture of medicament for treating IL-TIF/IL-22 mediated discorder. The antibody is useful for determining presence of the soluble protein, where the antibody is detectably labelled. The present amino acid sequence represents the human IL-TIF/IL-22 binding protein #2 of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   88
                                                                                                                                                                                                                                                                                                                                           The patent discloses novel human cytokine, ZCYTO18 protein and its corresponding DNA. ZCYTO18 protein induces proliferation of cells expressing zcytoril, a receptor for ZCYTO18 or induces cytotoxicity in K5626 cells. ZCYTO18 DNA is useful for detecting a genetic abnormality in a patient. ZCYTO18 DNA and its antibodies are useful for detecting cancer and inflammation. ZCYTO18 protein is useful for killing cancer cells. It is useful for increasing platelets in a patient or injured tissue. It is also used in gene therapy. The present sequence is human zcytor16, which is a naturally expressed soluble receptor antagonist of ZCYTO18 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel human cytokine polypeptide, ZCYT018, useful for treating cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MMPKHCFLGFLISFFLIGVAGTQSTHESLKPQRVQFQSRNFHNILQWQPGRALTGNSSVY

The present sequence is human DNAX cytokine receptor subunit 4.2

(DCRS4.2). DCRS4 gene is located on chromosome 6q24.1-25.2.

(Cytokine receptors, fragments and antibodies are useful for treating immunological disorders. DCRS3 (50R), DCRS4 (cytor) or fragments are useful in drug screening to identify compounds having binding affinity the receptor subunit. Modulators of DCRS are useful for modulating the physiology or development of a cell or tissue culture cells. A purified DCRS is useful as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to production of antibody to the endogenous receptor. Cytokine receptor sequences are useful as probes for detecting levels of the cytokine receptor in patients suspected of having an immunological disorder. Antibodies have therapeutic value, are useful as potent antagonist, in detecting or quantifying ligands, for isolating DCRS proteins and peptides, to screen expression libraries for particular expression products, to raise anti-idiotypic antibodies and for detecting or diagnosing various immunological conditions related to expression of the protein or cells which express the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New mammalian receptor proteins related to cytokine receptors, useful for regulating cell development and for diagnosis and treatment of immunological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MMPKHCFLGFLISFFLTGVAGTQSTHESLKPQRVQFQSRNFHNILQWQPGRALTGNSSVY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a human cytokine receptor polypeptide, designated zcytor16. The zcytor16 polypeptide can be expressed by standard recombinant methodology and can bind to IL-TIF (undefined). The zcytor16 protein is useful for: inhibiting IL-TIF induced proliferation or differentiation of hematopoietic cell(s) (progenitors); reducing IL-TIF induced or IL-9 induced inflammation, and suppressing an inflammation receptor polypeptides such as soluble zcytor 16/CRF2-4 can be used to reduce progression and symptoms of cancer. Zcytor16 polypeptides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cytokine receptor; Zcytorl6; IL-TIF; autoimmune disease; dermatological; inflammatory disease; inflammatory bowel disease; rheumatord arthritis; asthma; systemic lupus erythematosus; myasthenia gravis; panoreatitis; diabetes; atherosclerosls; glomerulonephritis; gene therapy; cytostatic; immunosuppressive; nephrotropic; allergy; placental health; abortion; cancer; human; chromosome 6.
can also be used to detect IL-TIF levels which is indicative of pathological conditions including inflammatory states (e.g. rheumatoid arthritis) and cancer. Antibodies that bind zcytoris polypeptides and topolypeptides themselves are useful for the treatment of inflammation, inflammatory diseases (e.g. infection, asthma, inflammatory bowel disease, rheumatoid arthritis and atherosclerosis) and autoimmune diseases. The antibodies and acytoris polymucleotides are also useful for detecting cancer. The present sequence represents the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TSETSDIQEPYYGRVRAASAGSYSEWSMTPRFTPWWETKIDPPVMNITQVNGSLLVILHA

Cytokine receptor family 2 (CRF2) related protein SEQ ID No

(first entry)

21-NOV-2002

```
The invention relates to cytokine receptor designated as mouse Zcytor16 which can bind and antagonise the IL-TIF. The Zcytor16 polypeptide is useful in modulating the immune system by binding Zcytor16 ligand, and thus, preventing the himding of the ligand with endogenous Zcytor16 receptor. It is useful for studying human inflammation or immune function, or for treating autoimmune or inflammatory diseases such as function, or for treating autoimmune or inflammatory diseases such as inflammatory bowel disease, rheumatoid arthritis, asthma, systemic upus erythematosus, wyssthenia gravis or allergy, atherosclerosis, cancer, diabetes, glomerulonephritis or pancreatitis, or in assessing therapeutic aspects of IL-TIF, chemical therapeutics, anti-IL-TIF antibodies or Zcytor16 soluble receptors. Zcytor16 DNA and the anti-mouse Zcytor16 antibody are useful as probes in detecting gene expression and gene structure, such as in the indetecting gene expression and gene structure, such as in the placental health and function. It is also used in gene therapy. The present sequence is human Zcytor16 protein. Human Zcytor16 gene resides
                                                                                                                                                                                                                                                                                                                   New Zcytor16 polypeptide useful for treating autoimmune or inflammatory diseases, e.g. inflammatory bowel disease, rheumatoid arthritis, asthma, atherosclerosis, cancer or diabetes, or in assessing

WO200266647-A2 Unidentified inflammation

New isolated CRF2-12 nucleic acid encoding a polypeptide, useful for diagnosing and treating disorders with abnormal CRF2-12 activity such as autoimmune diseases like rheumatoid arthritis, multiple sclerosis

Claim 2; Page 6; 91pp; English

and inflammation

```
The invention relates to an isolated type 2 cytokine receptor family (CRED-12) nucleic acid molecule encoding a polypeptide with amino acids 21-66 of a 231 residue amino acid sequence, given in the specification, or its complement. The compositions and methods of the present invention are useful for diagnosing, screening and treating disorders associated with abnormal CRED-12 activity such as autoimmune diseases like rheumatoid archritis, multiple sclerosis and inflammation. This sequence represents a cytokine receptor family 2 (CRF2-12) protein relating to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           89 TSETSDIQEPYYGRVRAASAGSYSEWSMTPRFTPWWETKIDPPVWNITQVNGSLLVILHA 148

The present invention provides the protein and coding sequences of 3 variants of a human cytokine receptor. The sequences can be used in the diagnosis, prevention and treatment of immune diseases, including psoriasis, cancer, chronic/life-threatening infections, rheumatoid arthitis, multiple solerosis, Crohn's disease, ulcerative colitis and transplant rejection and in reproductive medicine, e.g. for diagnosing abnormal immune reactions which cause abortions. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid encoding soluble cytokine receptor, useful for diagnosis and treatment of e.g. immune disease, also related protein

The present invention relates to a new polynucleotide that encodes a soluble protein which binds to interleukin (IL)-TIF/IL-22 (also referred soluble protein which binds to interleukin (IL)-TIF/IL-22 (also referred to as IL-22BP), where the complementary sequence of the invention hybridises under stringent conditions to a nucleotide sequence of 2271 or 2366 base pairs, as given in the specification. The molecules of the Invention are useful for inhibiting (antagonising) effect of IL-TIF/IL-22 on a cell, for determining whether IL-TIF/IL-22 is present in a sample, for inhibiting binding of IL-TIF/IL-22 to a binding partner, preferably in vitro, and for obtaining an antibody molecule specific for the soluble protein of the invention, from a population or panel of antibody molecules of diverse binding specificity. The soluble protein is further useful in manufacture of a medicament for treating an IL-22 mediated fragment of IL-TIF/IL-22 or the soluble protein, that modulates binding of the soluble protein, that modulates binding of the soluble protein to IL-TIF/IL-22, where the agent identified is used in the manufacture of medicament for treating IL-TIF/IL-22 mediated disorder. The antibody is useful for determining presence of the soluble protein, where the antibody is detectably labelled. The present amino acid sequence represents the human IL-TIF/IL-22 binding protein #1 of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polynucleotide and polypeptide of soluble protein which binds to interleukin-TIF/IL-22 useful for inhibiting effect of IL-TIF/IL-22 on a

                                                                                             This invention relates to the cDNA and protein sequences of novel secreted and transmembrane polypeptides FRO polypeptides. The invention also comprises a method for producing the proteins of the invention by recombinant means and antibodies specific for the protein of the invention. The antibody may be used for detecting the FRO proteins of the invention and may be used to modify their activity. To isolate the full-length FRO cDNA or to isolate other cDNA its construct hybridisation probes for mapping the gene which encodes that FRO and for genetic analysis of individuals with genetic disorders, in assays to identify other proteins or molecules involved in binding in assays.
                                                                                                                                                                                                                                                                                                                                       reaction, to generate transgenic animals or knock-out animals which in turn are useful in the development and screening of therapeutically useful reagents, for chromosome identification, and tissue typing. The PRO polypeptides are useful in gene therapy, and as molecular weight markers for protein electrophoresis purposes. The sequences may also be used to detect overexpression on PRO polypeptides in cancerous tumours and for screening for differentially expressed genes using microarray technology. The present sequence represents a human PRO protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MMPKHCFLGFLISFFLTGVAGTQSTHESLKPQRVQFQSRNFHNILQWQPGRALTGNSSVY

The invention relates to secreted and membrane-associated polypeptides and polynucleotides. The sequences of the invention are useful in diagnostic assays for detecting diseases associated with inappropriate activity or levels of these polynucleotides, and in identifying their agonists and antagonists that are potentially useful in therapy. The sequences of the invention are useful as vaccines for inducing timmunological response. The sequences of the invention are useful for treating cancers, infections, autoimmune disorders, hematopoietic cimmunological response. The sequences of the invention are useful for treating cancers, infections, autoimmune disorders, hematopoietic cimmunological response. The sequences of the invention are useful for treating cancers, infections, alsease, Huntington's choice, multiple sclerosis, bullosa, Parkinson's disease, Huntington's choice, multiple sclerosis, viral and bacterial infections, Alzheimer's disease, transplant rejection, allergies, schizophrenia, spay1432FRO3-associated disorders, respiratory disease including parasupranuclear palsy, myotonic dystrophy, depression, anxiety disorders and sleep disorders, cardiovascular disease including parasupranuclear palsy, myotonic dystrophy, depression, anxiety disorders and sleep disorders, cardiovascular ceptical including chronic obstruction diseases including chronic obstruction, creptical muscle disorders including hypoertolesterolaemia, hypertriglyceridaemia, cirrhosis, viral and non-viral hepatitis, type II diabetes mellitus, renal disease including acute and chronic renal failure, glomerulonephritis, gastrointestinal diseases including hypoersplenism, contendintis, gastrointestinal diseases including hypoersplenism, hodskin's disease and malignant lymphoma, testicular cancer, male reproductive disease and malignant lymphoma, testicular cancer, male reproductive disease including lower respiratory and rendintis; human over honer or man en renoice is human over or man en entering sections or exproductive diseases including
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel secreted and membrane-associated polypeptides and polynucleotides useful for preventing, ameliorating or correcting dysfunction or disease including diabetes, cancer, hypertension and growth
haemostatic, vulnerary, anticonvulsant, antirheumatic, neuroprotectiv nephrotropic, hypotensive, vasotropic, cytostatic, cerebroprotective, allergy, cytokine receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                              Martensen SA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to cytokine receptor polypeptide, Zcytor16. The polypeptide is useful in modulating the immune system by binding Zcytor16 ligand and thus preventing the binding of the ligand with endogenous

2cytor16 receptor. It is useful for studying human inflammation or immune
                                function, or for treating autoimmune or inflammatory diseases such as inflammatory bowel disease, ulcerative colitis, Crohn's disease, arthritis, psoriasis, endotoxaemia, septicaemia, toxic shock syndrome or infectious disease, asthma, cancer, diabetes, renal dysfunctions or infectious disease, asthma, cancer, diabetes, renal dysfunctions or pancreatitis or in assessing therapeutic aspects of ILTIF, chemical therapeutics, anti-ILTIF antibodies, anti-Zcycoris antibodies or Zcytoris soluble receptors. The nucleic acid molecule and the antibody are useful as probes in detecting gene expression and gene structure, such as in the diagnosis and/or prevention of spontaneous abortions or in monitoring placental health and function. The invention is useful in gene therapy. The present sequence is human Zcytoris protein. Zcytoris gene is located on chromosome 6q23-q24.

Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. PIR 76:* 1: pir1:* 2: pir2:* 3: pir3:* 1: pir4:*

A; Title: Human tissue factor contains thioester-linked palmitate and stearate on the cyt
A; Cherence number: A37422; MUID: 99000604; PMID: 3166978
A; Contents: annotation; disulfide bonds and fatty acid binding site
C; Comment: Tissue factor is an integral membrane glycoprotein that serves as a receptor
C; Comment: Expression of tissue factor can be induced in a variety of tissues by certain
C; Genetics:
A; Gene: GDB: F3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 295;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 11.4%; Score 163; DB 1; 23.4%; Pred. NyAlternate names: coagulation factor III

C)Species: Bos primigenius taurus (cattle)

C)Accession: JQ1319

R)Takayenoki, Y.; Muta, T.; Miyata, T.; Iwanaga, S.
Biochem. Blophys. Res. Commun. 181, 1145-1150, 1991

A;Title: CDNA and amino acid sequences of bovine tissue factor.

A;Reference number: JQ1319; MUID:92109720; PMID:1764065
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             203 YRVFIINNSLEKEQKVYEGAHRAVEIEALTPHSSYCVVAEIYQPMLDRRSQRSEERC 259
